

Pibit.ai is an SF-based insurtech company reconstructing the art and science of commercial underwriting for carriers and MGAs.

At the heart is the **CURE™ platform**, the industry's only centralized underwriting risk environment powered by agentic underwriting services that deliver decision-ready outcomes. It converts submissions into decisions by automating intake, triage, and data enrichment from documents and external sources while surfacing risk insights that help customers win the right accounts faster, scale throughput, and reduce loss ratios.

Backed by **Y Combinator**, our proprietary platform serves dozens of clients across the U.S., enabling 85% faster underwriting, a 32% increase in GWP per underwriter, and up to 700 basis points improvement in loss ratios.

Role Overview

We are looking for a Data-driven Operations / Database Executive to support sales and marketing operations by building scalable data systems, and CRM insights within the our CRM ecosystem.

This role will work closely with sales and marketing teams to prepare database for events, campaigns and outbound.

Key Responsibilities:

1. Database & CRM Management

- Build, clean, and maintain master databases of leads, accounts, and contacts
- Ensure high data quality (deduplication, standardization, validation)
- Upload and manage data in CRM systems (e.g., HubSpot or similar)
- Maintain structured datasets with clear tagging (source, campaign, ownership, etc.)

2. Lead Research & Enrichment

- Research and build target account lists based on industry, geography, and ICP
- Identify relevant decision-makers (titles, roles) within target companies
- Enrich datasets with missing information (company details, emails, etc.)
- Validate and cross-check data from multiple sources

3. Event & Outbound Data Operations

- Process and clean event/conference lead lists
- Merge event data with existing CRM without duplication
- Prepare outbound-ready lead lists for SDRs
- Maintain consistency across multiple data sources (events, outbound, inbound)

4. Sales & Marketing Support

- Handle daily ad-hoc data requests from sales and marketing teams
 - Ensure fair and accurate allocation of data across teams
-

Experience & Background:

- 1+ years of experience in Data Operations or Sales Operations
- Proficient in Microsoft Excel
- Familiarity with **HubSpot** or similar CRM platforms
- Experience in building target account lists based on industry, geography, and ICP
- Ability to handle ad-hoc data requests from sales and marketing teams
- Comfortable working in a fast-paced **start-up environment & US shift**.

What We're Looking For

- Takes full responsibility for data accuracy and delivery
- Doesn't rely on instructions for every step
- Able to work with **near-zero error tolerance**
- Always validates data before sharing
- Can handle messy, unstructured data and bring order to it
- Comfortable managing **multiple requests from AEs and SDRs**
- Can prioritize effectively under pressure
